With the Alpha Prime, Velodyne Lidar delivers the optimal long-range sensor for autonomous mobility. The Alpha Prime’s world-class combination of range, image clarity and field of view detects roadway objects with reliability and precision.

This state-of-the-art sensor generates a high-quality point cloud in a wide variety of light conditions, with advanced sensor-to-sensor interference mitigation, power efficiency, and thermal performance.

Providing long-range detection of low reflectance objects such as tire fragments, dark vehicles, asphalt, and pedestrians, the Alpha Prime enables autonomous operation within a broad range of settings, including urban and highway environments. A culmination of Velodyne’s decade-plus experience engineering and manufacturing lidar, the Alpha Prime is powering safe autonomy.
### Specifications

**Sensor**
- Channels: 128
- Measurement Range: up to 300m
- Detection: 180m on 5% NIST and up to 300m on 10% NIST
- Range Accuracy: +/- 3 cm (Typical)
- Return Modes: 1 or 2
- Horizontal Field of View: 360°
- Vertical Field of View: 40° (-25° to +15°)
- Minimum Angular Resolution (Vertical): 0.11° (non-linear distribution)
- Angular Resolution (Horizontal): 0.1° to 0.4°
- Frame Rate: 5 Hz to 20 Hz
- Integrated Web Server for Easy Monitoring and Configuration

**Laser**
- Laser Product Classification: Class 1 - Eye-safe per IEC60825-1:2014
- Wavelength: ~ 905 nm

**Mechanical/Electrical/Operational**
- Power Consumption: 23W (under typical conditions)
- Operating Voltage: 9V - 28V (including regulated power supply)
- Weight: ~ 3.5 kg (without cabling)
- Dimensions: See diagram on previous page
- Environmental Protection: IP67
- Operating Temperature: -20°C to 60°C (under typical conditions)
- Storage Temperature: -40°C to 105°C

**Output**
- 3D Lidar Data Points Generated
  - Single Return Mode: ~ Up to 2.3M points per second
  - Dual Return Mode: ~ Up to 4.6M points per second
- Ethernet Connection: 1000BASE-T (IEEE 802.3ab)
- UDP Packets Contain:
  - Time of Flight Distance Measurement
  - Calibrated Reflectivity Measurement
  - Synchronized Time Stamps (μs resolution)
  - System Diagnostic Data
- GPS: $GPRMC or $GPGGA NMEA Sentence from GPS Receiver (GPS not included)

---

1. These are projected specifications for final production parts. The specifications for any sample, prototype, or other non-final or pre-production products may be different from the specifications in this document. For more information, please contact Velodyne Sales.
2. Configuration dependent.
3. Typical accuracy refers to ambient wall test performance, excluding Retro, across most channels and may vary based on factors including but not limited to range, temperature and target reflectivity.
4. Fully characterized at 10 Hz.
5. Operating power may be affected by factors including but not limited to range, reflectivity and environmental conditions.
6. Operating temperatures may be affected by factors including but not limited to air flow and sun load.
